VIRUS ZERO PET
바이러스제로 펫

VIRUS ZERO-PET Pure Nano Chlorine Dioxide Protects Your Animals from All Diseases.

Another precious family member - a clean product for sterilization and deodorization for pets.

Pets are valuable members of the family. You cannot see disinfectants or deodorants that are toxic to your loved ones. Pure ClOX (chlorine dioxide) has already been recognized by all international organizations such as WHO, EPA, FDA, JECA, HACCP, and HPA for medical, food, water treatment, livestock, and industrial use.

Spray evenly over your pet's house, beds, carpets, and other areas once in a while. It eliminates viruses, bacteria, and odors, and kills mites. If your pet has anemia or an infectious disease, dilute it in drinking water at a ratio of 2 parts (1000:1) and continue feeding until symptoms improve. Adding a drop to the pet's water periodically during care is also helpful.

Phone number: 050-21-8888 (toll-free) or 02-820-0000 (Korea) or 02-820-0000 (Korea)
Product Name: Virus Zero-PET (Total for 1 year from the date of manufacture)
Capacity: 500ml (International Volume: 16.9 fl. oz.) (100% Pure)
Other substances: none
pH: 7.0 (Neutral)
Use according to the instruction manual.
Precautions: use 10 times in a week from appearance and stop use if there is weight loss.
Keep out of reach of children and use not alone. If the product solution comes into contact with your skin, wash it with running water. If it gets into the eyes, wash the eyes with running water immediately.
Not recommended for a laboratory animal.

This method has been used worldwide and is safe for use. It is safe for use in homes, schools, and offices. It is safe for use in homes, schools, and offices. It is safe for use in homes, schools, and offices.

● **T-KILL PEST CONTROL SERIES** ●

T-KILL1: مكافحة الآفات الماصة للدم (القراد، البراغيث)

T-KILL1: Blood-sucking pest control (ticks, fleas) - Registration No. 3-5-054

T-KILL2: مكافحة الحشرات الطائرة (البعوض، الذباب)

T-KILL2: Flying insect control (mosquitoes, flies) - Registration No. 2-6-003

JINDISARI Ticks, Fleas, Bedbugs, Lice

TKILL1

A 1mm subtropical external parasite called TICK, MITE, RED MITE, or CHICKEN LICE. During the day, rest without moving in the baskets, shades, etc., at night moves and vampires.
TICK can survive up to 9 months without vampires. During chicken and animal breeding periods, cleaning, cleaning and disinfection are required.

- **Damage and Symptoms of TICK Infection**
 - Medium that spreads bacterial and viral diseases
 - Reduced egg production
 - Anemia, developmental delays, sleep disorders, malnutrition and malnutrition
- **Where do TICKS live?**
 - Because chicken Ticks like narrow, dark, and humid places, live mainly on the back of cage cages, upper part, cage column, under feeder, house belt, chicken head.
 - In the case of cows, dogs, goats, etc., they reproduce and grow throughout the body.
- **Blocking Tick**
 - Do not allow tick to enter the farm from the outside.
 - Intake Path: Items such as humans, wild animals (rats, pigeons, etc.), other chickens and animals, and vehicles, carrying boxes, and eggs carrying containers.
 - Block the entry of outsiders inside the house and make direct contact with chickens so that they can enter the farm after replacing the shower with clothes and shoes prepared by the farm.
 - Minimize the tick density inside the farm.
 - Spray the chemicals within 2 to 3 days after shipping, remove the dust and clean the water. Clean the water with a high pressure cleaner to remove dust and ticks from eggs or larvae.
 - After washing and disinfecting, make sure to select the appropriate control chemicals. Disinfection is done in all areas, including ceilings and walls

- Lyme disease
- Babesiosis human granulocytic ehrlichiosis
- Tularemia
- Rocky Mountain spotted fever
- Colorado tick fever
- Human monocytic ehrlichiosis
- Relapsing fever
- Severe Fever with Thrombocytopenia Syndrome (SFTS)

- Caution**
- Shake well before use and immediately after thoroughly diluting
 - Do not drink, and keep out of reach of children.
 - In case mixed-use with other products, use after you confirm with small amount

Liquid 500ml
Neem Oil extract 10%
Sophora Extract 10%
Wood vinegar 10%

Ticks act as deadly carriers of animal bloodsucking as well as viruses and bacteria. In particular, in the case of a venomous tick, the poison spreads through the body, causing paralysis from the feet and legs to muscle pain, arms and head over several hours to several days, or even death in severe cases. In particular, in the case of laying hens, due to mite stress, the laying rate is reduced and the egg quality is poor.

Ticks, Fleas, Bedbugs, Lice

FORM	LIQUID
NET WEIGHT (GROSS)	500ml (20 fl.oz) (Net content 480ml)
TECHNOLOGY	ACARICIDE
PROCESOR	KOREA PESTICIDE
ORGANIC REGISTRATION No.	10-004
ACTIVE INGREDIENTS	Neem Oil extract 10%, Sophora Extract 10%, Wood vinegar 10%
INACTIVE INGREDIENTS	Other 10% (Inert matter)
APPLICATION SCOPE	Feed, water, soil, and bird bugs on chickens and general animals
MIX WITH OTHER PRODUCTS	No mixed systems

● **Patent Number:** 10-2018-0140742 (chicken mite acaricide composition with natural plant extract as active ingredient)

Neem Oil, Sophora Extract are natural insecticides that humans have used for thousands of years. These plants have remained in some dangerous and sometimes beneficial ways for humans. Korea Fertilizer's team transformed it into maximum profit under the name T-KILL. While various pests such as mosquitoes, flies and mite can be removed in an environmentally friendly manner, this product is particularly effective at removing ticks that can be fatal to animals.

In particular, the poisonous insecticide used to remove poultry ticks remains in the poultry's body as well as in eggs, which eventually harms human health. However, T-KILL can solve this problem.

How to use

- To prevent mites, or when very small ticks are seen, dilute it with water in a ratio of 10:1 to 20:1 and spray it in the barn. [10L water+1000mL-500mL]. Spray twice every 5-7 days. Ticks, red spiders, stink bugs and more.
- Chicken ticks are nocturnal. Chicken mites colonize during the day anywhere they can lay eggs, such as on the body of the chicken (neck, anus, around the comb), in uncovered crevices, and sheltered corners. Chicken ticks larvae are light gray, adults are dark gray, but after bloodsucking, they are dark red, so it is easy to check whether or not they are bloodsuckers. Chicken ticks suck blood on the third day after hatching from the egg, and then become an egg-laying adult on the third day. Therefore, chicken ticks increase exponentially between the moment of emergence and spread throughout the chicken house, causing many infectious diseases and greatly reducing productivity. Therefore,

■ ADDITIONAL KOREAN PRODUCTS ■

- PAEAN Patrasche: Advanced pet shampoo (Registration No. 481)
- NON SMELL POOP: Digestive support additive (Permit 98939402)

This is a shampoo, but we don't call it a shampoo.

1. Won first place in the International New Materials Competition (STR-020).
2. Prevents hair loss, eliminates odor, heals skin conditions, and has insecticidal effects.
3. Contains 83% natural plant extracts.
4. Excellent cleansing power and rich foam. Use like regular shampoo, especially on wounds. Apply directly or lather. It is non-irritating to the eyes, making it safe for use on the face.

مكافح الحشرات الطائرة - T-KILL2

PESTICIDE PART – T-KILL 2

Mosquitoes, like other insects, take the stage of egg-larvae- pupa- adults. Until adulthood, depending on the breed and ambient temperature, it usually takes about 5 to 14 days. However, mosquito species that live in cold or no water may stop growing for months until they are warm and watery. The place of laying eggs varies depending on the environment and the types of mosquitoes. Not only fresh water, but also in seawater, eggs in pools, even abandoned tires or bottled water.

That's why when mosquitoes are eradicated, they work on sewers and fill puddles. If it is indoors, it grows in a moderately warm and damp nutritious place. Sewers, vents, toilets, gaps in windows, back of refrigerator, etc. In particular, there is a high probability that the habitat will be invisible, such as behind a refrigerator, a television, or under a sink. The shallow water in the drainage of the underground parking lot is also a good place for mosquitoes to lay their eggs. Mosquitoes larvae usually live in turbid and stagnant water at levels 4-5, rather than clear, clean water at levels 1-3. There are many mosquitoes' natural enemies near the clear water. Mosquitoes larvae change to pupa when mature, and then to adult mosquitoes after 4-5 days.

TEST AGENT	DILUTION	CONTROL EFFECT (%)			
		24hr	48hr	72hr	96hr
T-1	100	91.4%	100%		120hr
T-2	250	82.7%	96.4%	100%	
T-3	500	12.7%	68.7%	94.1%	100%

We recommend using water and 250: 1 by default. 2 times every 5-7 days. Ticks, fruit fly, mite, Stinkbug, peach pyralid Moth, pearl-moth, Small Brown Planthoppers, Grass leaf roller, chestnut Curculio, Aphid, Mythrina separata, Laticia Consocia, Planonychus ulmi, Tetranychus urticae, Magnaporthe grisea

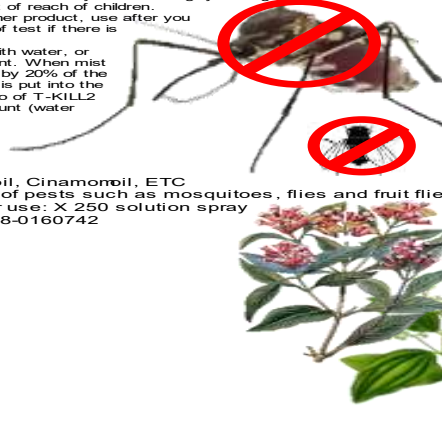

Cautions

- Shake well before use and immediately after thoroughly diluting
- Do not drink, and keep out of reach of children.
- In case mixed-use with other product, use after you confirm with small amount of test if there is no hemical harm
- It may be diluted 250: 1 with water, or sprayed with a diffusion agent. When mist spray is introduced spreads by 20% of the tank capacity and the other is put into the water. Dilute the dilution ratio of T-KILL2 to 250: 1 with the total amount (water + diffuser).

- Ingredients: Eugenol oil, Cinamon oil, ETC
- Features: Elimination of pests such as mosquitoes, flies and fruit flies
- Recommendations for use: X 250 solution spray
- Patent Number: 1Q018-0160742

Clove tree and cinnamon tree are natural pesticides that humans have used for thousands of years to relieve pain and remove mold and viruses. Clove Eugenol oil is particularly antibacterial and has been used for a long time to remove mosquitoes. In addition, pure salicylaldehyde oil extracted from cinnamon tree is an anti-allergic, anti-inflammatory action and a natural ingredient to combat mosquitoes and ticks. Therefore, there is no harm to people and animals.

WOW~ My poop doesn't Smell~!

NONSmell

PET POOP
Happy Pet Projects

Notice : To all pet owners in the world

Our body is made up of many cells, and a mitochondria in the center of the cell creates energy to keep the cells alive. However, mitochondria are made of a material called silicon.

If there is a lack of silicon, the heartbeat becomes weaker, exercise capacity is lowered, and the immune system is also weakened. Falling easily and getting sick, in particular, the digestive and absorption capacity is poor, which causes anorexia and Serious health problems.

[NON Smell poop] is an amazing product that especially silicon is the key and improves the living environment and disease prevention by enhancing the immune system-!!!

NSP
L-Arginine
Nitric Oxide
and Silicon
Water for Pets
to Drink ~!!

Simply Put

My means that
**"We eat well, poop well,
and don't get sick."**
In particular, since the rate of digestion and absorption is strong, there is almost no odor from the poop and urine.

If your poop has a foul odor, it means that it is not digested properly.

LIQUID	300ML
TECHNO. MANUFACT. SUPPLIER	
KOREA FERTILIZER	

Enhancing immune-system
Improves the living environment & disease prevention.
Help to digest the poop properly so it doesn't make poop smell

Management of companion animals

• Various beneficial effects such as sterilization and purifying power of silicon also work on all animals such as dogs, cats, and birds. • If you dilute it with your pet's drinking water and feed it, the animal's unique odor disappears and the immunity to various diseases is strengthened, making it stronger against diseases. • If pets have a skin disease that does not heal well, spray it on itchy or hairy areas or dilute it in bath water and wash it to improve symptoms.

Stable Nutrient Supply

• Silicon provides a stable supply of nutrients by penetrating deeply into all foods with excellent penetrating power, extracting all nutrients as much as possible and allowing them to be consumed. • In addition, it allows the nutrients you eat to penetrate deep into the intestinal cells and absorb them, allowing you to maintain the best possible health. • Silicon is the main component of cells that make up blood vessels, which are passageways for blood supplying nutrients. If nutrients are not supplied properly, it leads to aging of blood vessels due to malnutrition, and aging of blood vessels impairs the supply of nutrients, thus making the metabolism difficult and harming health. Therefore, the stable supply of nutrients is directly related to the health of the human body as well as the health of blood vessels.

Quality control labeling
